1 Introduction

1.1 Purpose

This document outlines the vision for the development of the Broadcast Scheduling Web Application (BSWA), a tool we are developing for CBC's Digital Products Department. This document provides a detailed overview of the project scope, stakeholder and user roles, as well as the functional user requirements and constraints.

1.2 Scope

The scope of this project is constrained to collecting, formatting, and manipulating scheduling data. The project aims to improve efficiency, and increase productivity in the scheduling process.

1.2.1 In Scope

- Analysis of the current scheduling workflows
- Design and development of a tool or system to automate or simplify data entry for scheduling tasks.
- Integration with existing scheduling software (e.g, excel) as needed.
- User interface design improvements to facilitate easier data manipulation.
- Implementation and deployment of the new or updated scheduling system.

1.2.2 Out of Scope

- Infrastructure changes
- Post-deployment support and maintenance
- Individual user customization of the system

1.3 Definitions, Acronyms, and Abbreviations

Term	Explanation
BSWA	Broadcast Scheduling Web Application
Scheduling Data	Third party broadcasters deliver the schedule for their event as a spreadsheet, and must be manually formatted into a working schedule for the CBC.
Third Party Media / Broadcasters	External Individuals / Institutions / Corporations that have / are partnered with CBC to provide access to stream programs on CBC to the public
DPD	Digital Products Department

2 Positioning

2.1 Business Opportunity

CBC currently allocates resources and time in the scheduling of specialized programming in the case of events such as the Olympics, leading to inefficiency and potential time-crunch. CBC has no existing product to help facilitate creating alignment documents for these edge cases, and has not developed an in-house solution to streamline this task at this time. Our initial focus will be to create a product that will accelerate the workflow of creating broadcast schedules and managing timeslot conflicts. We will deem the product successful when staff use this product to generate alignment documents from provided data efficiently.

2.2 Problem Statement

During special events, such as the Olympics, broadcasts are not scheduled automatically. DPD employees take time out of their day to organize the schedule data manually in an excel spreadsheet for the broadcast. This process is time consuming, and could be streamlined with a dedicated tool.

The Problem of	Organizing, standardizing schedule data, and resolving time conflicts data by hand
affects	DPD staff
the impact of which is	Increased employee workload, stress during peak periods
a successful solution would be	A web application to transform unformatted schedule data into formatted alignment documents with no time conflicts that can be easily viewed and modified by the user

Table 1 Problem Statement

2.3 Product Position Statement

For	CBC DPD
Who	Are manually transforming raw schedule data into a clear and formatted usable alignment document
The CBC BSWA	is a broadcast scheduling application
That	Takes schedule data, and automatically generates a formatted alignment document, and allows for quickly resolving conflicts, and easy manipulation
Unlike	N/A

Our product	Is a unique solution asked for by CBC technicians
-------------	---

Table 2 Product Position Statement

2.4 SWOT Analysis

Strengths (Internal)	Weaknesses (Internal)
Ability to cater towards the department's exact requirements	Inexperience in the department's official processes
User friendly / Navigable interface	Team will need to learn to use software
	Resistance to change among team
Opportunities (External)	Threats (External)
Little to no enterprise products available	Third party provides pre scheduled and formatted data
Better enterprise automation team	Other automation software being developed in-house
Improved productivity for the team	

3 Stakeholder and User Descriptions

3.1 Stakeholder Summary

Stakeholder Name	Represents	Role
CBC DBD	The department that users belong to	Providing project requirements and sample data

Table 3 Stakeholder Summary

3.2 User Summary

User Name	Description	Responsibilities	Stakeholder
Broadcast Technician	Part of the DPD	Takes the schedule data and organizes it into a proper broadcast schedule	DPD
Supervising Technicians	Overseeing the operations and output from the DPD	Overseeing the application output, and confirm that there are no scheduling or timeslot conflicts, gives final approval	DPD

Table 4 User Summary

4 Stakeholder Requirements

ID	Requirement	Stakeholder
S1	Requires an easy to use interface to sort out time conflicts from schedule data	DPD
S2	Requires the ability to save, view, and edit previous and current program schedule data	DPD

Table 5 Stakeholder Requirements

5 System Features

ID	Feature	Stakeholder Requirement ID
F1	Take in unformatted schedule data, transform into a schedule with no overlapping time blocks	S1
F2	Transform formatted schedule data into easily readable schedule visualization	S1
F3	Allow reorganization of automatically generated schedule	S1
F4	Store previously created schedules	S2
F5	Allow viewing and editing previously created schedules	S2

Table 6 System Features

6 Assumptions

- No other team is working on a tool for this problem
- Access to CBC team members for feedback
- Team has the skills to complete project
- Team will be able to deliver all project goals on time
- Our application will increase efficiency for stakeholders
- Data will be provided for the creation and testing of the application
- Third party media spreadsheet data format doesn't change

7 Constraints

- Limited time to finish project
- The app must perform without bugs on deployment
- Application must be able to be run locally on CBC premises
- Limited sample data
